SUMMARY

Analytics leader with 7 years in fintech across Europe and the US. I build the data layer products are measured on — warehouse models, metric definitions, and self-serve reporting that non-analysts actually use. Strongest on turning messy operational data into something a product team can make decisions from; I have run A/B tests but experimentation design has been a supporting part of my work rather than the center of it.

PROFESSIONAL EXPERIENCE

Senior Data Analyst, Product & Growth

Brex — San Francisco, CA | June 2024 – Present

- Sole analyst for the Expense Management product line (4 PMs, ~35 engineers). Built the first end-to-end funnel instrumentation for the mobile receipt-capture flow, which previously had no event tracking at all.
- Defined and shipped the Product Health metric set (activation, weekly active admins, policy-coverage rate) now reviewed in the monthly business review; wrote all underlying dbt models and the metric documentation.
- Ran 9 A/B tests on onboarding and receipt-capture prompts using the in-house experimentation platform. Largest win: a reordered onboarding checklist that raised 14-day activation by 6.1% (n≈18k, p<0.01).
- Built the self-serve Looker explore used by ~120 people across Product, Sales and Support; reduced ad-hoc SQL requests to the analytics team by roughly 60% over two quarters.

Analytics Engineering Lead

Klarna — Berlin, Germany | March 2021 – May 2024

- Managed a team of 3 analytics engineers supporting Consumer App and Merchant Portal.
- Owned the core transaction and user data models in Snowflake (dbt, ~400 models); introduced testing, CI and documentation standards that cut broken-dashboard incidents from ~6/month to under 1.
- Partnered with Product on the checkout-abandonment analysis that prompted the 2022 one-click redesign; sized the opportunity at €14M annualized GMV using historical cohort comparison.

Business Intelligence Analyst

N26 — Berlin, Germany | September 2019 – February 2021

- Built KPI reporting for customer operations and card issuing; automated the weekly executive pack (previously assembled by hand in Excel).

SKILLS

SQL: Advanced — Snowflake, BigQuery, Postgres, Redshift. Window functions, incremental modeling, query optimization.

Python: Intermediate — pandas, matplotlib, some scikit-learn. Used mainly for analysis and scripting, not production ML.

Data tooling: dbt (expert), Airflow, Dagster, Fivetran, Segment, Amplitude, Mixpanel.

BI: Looker (LookML authoring), Tableau, Metabase, Mode.

Statistics: A/B testing with a managed platform, sample size and power calculations, cohort and retention analysis, basic regression.

Other: Git, Jira, stakeholder workshops. German (native), English (fluent), Dutch (conversational).

EDUCATION

M.Sc. Information Systems — Technische Universität München, 2019. Thesis: customer-churn modeling in subscription businesses.

B.Sc. Business Administration & Statistics — Universität Mannheim, 2017.

CERTIFICATIONS

dbt Analytics Engineering Certification (2022) · Looker LookML Developer (2021)
