

ABOUT

I started in marketing and taught myself my way into analytics because I kept wanting to know *why* the campaign worked. Four years later I run the growth analytics function at a marketplace startup — SQL every day, experiments where I can get the traffic, and a lot of translating numbers for people who do not want to look at a dashboard. I am applying to OpenAI because I want to go deeper on the statistics side with people who will hold my work to a higher bar than I currently hold it myself.

EXPERIENCE

Senior Growth Analyst

Jan 2024 – Present

Faire · San Francisco, CA

- Only analyst embedded with the Retailer Growth pod (2 PMs, 11 engineers). Own weekly reporting, funnel analysis and the experiment readouts for acquisition and reactivation.
- Ran 14 A/B tests through Optimizely and the internal platform — email cadence, referral incentives, first-order discount thresholds. Best result: a re-timed reactivation email sequence, +8.3% 60-day reorder rate on a 40k-retailer test.
- Rebuilt the retailer activation funnel in Amplitude and dbt after discovering the old definition counted browse sessions as activation; the corrected number was 22% lower and reset the team's 2024 targets.
- Built the self-serve Tableau dashboard now used weekly by the 20-person Growth org; wrote the accompanying "how to read this" guide.
- Present growth results at the monthly all-hands; regularly the person asked to explain what a confidence interval means to non-technical partners.

Marketing Analyst → Growth Analyst

Mar 2022 – Dec 2023

Peloton · New York, NY

- Owned paid-channel reporting across Meta, Google and TikTok (\$30M+ annual spend); built the blended-CAC model used in monthly budget allocation.
- Partnered with the lifecycle team on a holdout test that showed a long-running winback campaign was near-zero incremental — the campaign was retired, saving ~\$1.1M/yr.
- Automated 12 recurring Excel reports into scheduled SQL + Google Sheets pipelines.

Marketing Coordinator

Aug 2020 – Feb 2022

Rally & Co. (agency) · San Diego, CA

- Campaign reporting and client decks for six DTC accounts; first exposure to SQL and the reason I changed careers.

TOOLS

SQL Python dbt Amplitude
Tableau Looker Optimizely
Snowflake BigQuery
Google Analytics Braze
Sheets Git

PROFICIENCY

SQL Advanced
Experimentation Intermediate
Python / pandas Intermediate
Statistics Learning
Storytelling Advanced

EDUCATION

B.A. Communication

San Diego State University · 2019

Minor: Business Analytics

Data Science Immersive

General Assembly · 2021

12-week full-time program

CONTINUING STUDY

Statistical Inference (Coursera, Johns Hopkins) — 2024
Experimentation & Causal Inference, Reforge — 2025
Currently working through *Trustworthy Online Controlled Experiments* with a reading group I organize

WRITING

"Notes From a Non-Statistician Running Experiments" — personal newsletter, ~2,400 subscribers
